ONLINE INSTRUCTIONS

22 mm, 27 mm, 32 mm CB Genoa Lead Cars

G222B, G224B G272B, G273B, G273B.HL, G274B, G274B.HL, G323B, G324B

Strictly follow all instructions to avoid an accident, damage to your vessel, personal injury or death. See www.harken.com for additional safety information.

IMPORTANT: See Inspection and Maintenance at end of manual.

Features

Sheaves feature high-load axle bearings for easy trimming.

Captive ball bearings: make cars easy to load and maintain.

Free running ball bearings in car and in genoa sheave: make it easy to adjust car under load.

Sheave carrier pivots to adapt to lead angles.

One piece car body: machined from 6061-T6 aluminum for strength and durability.

Hardcoat anodized: Hard Lube impregnated for durability

Terms

Attaching Splice to Deadend on Car or Controls

- 1) Loosen one dead-end eyestrapscrew on end control. Remove other screw and rotate bail to capture splice loop. Install screws using a threadlocker such as blue Loctite® on screws.
- 2) When using smaller control line pass eye through dead-end eyestraps and run tail through to make a hitch without undoing screws.

Installing Traveler Car on Track

Install forward end control. Position car at end of track with control block assembly facing towards the bow. Gently roll car onto track. Car should roll on easily, if not check to make sure you are using CB track. **Do not remove ball retaining wires.** Cars will not roll unless they have retaining clips. If any balls are lost refer to following instructions for quantities and how to load. Attach shock cord to aft leg of sheave carrier.

Reeving Lead Car and Control Blocks

Install end stop. Install control line turning block and cleat. See chart below. Install shock cord retrieval system.

Deck-Mounted Control Line Parts

Part No.	Size	Control Block	Cam-Matic® Cam Cleat	Shock Cord Block/eyestrapscrew
G222B, G224B	Small Boat	350/2644	365/150	233/073
G272B, G273B, G274B	Midrange	2644/2606	150	233/073
G273B.HL, G274B.HL	Midrange HL	2606/6106	150	350/073
G323B, G324B	Big Boat	2606/6106	150/280	350/073

Loading Ball Bearings into CB Cars

Position car on edge with retaining clip in place. Gently push one ball at a time into car from center of clip. Allow balls to roll into return race and insert remaining balls. **Do not overfill car!**

Ball Replacement Chart

Car	Car Length		Balls Per				Ball Ø	
	in	mm	Car	Balls	Order	Balls Per Set	in	mm
G222B, G224B	4 1/8	105	60	Torlon®	177	21	1/4	6
G272B, G273B, G274B	5 3/16	132	60	Torlon®	1526	25	5/16	8
G273B.HL, G274B.HL	9	229	96	Torlon®	1526	25	5/16	8
G323B, G324B	9 1/8	231	90	Torlon®	547	25	3/8	10

Removing Ball Bearings from CB Cars

Position car on edge and gently push one ball at a time from center of retaining clip. **Do not remove retaining clip from car!**

Adding Pivot Stop—Sold Separately

A pivot stop will keep sheave carrier from hitting side of cabin.

Car Part No.	Pivot Stop Part No.
G222B, G224B	H-36086A
G272B, G273B, G274B	H-54398
G273B.HL, G274B.HL	H-54999
G323B, G324B	H-54399

Mounting Pivot Stop

If possible, remove car from track.

1. Remove retaining screw. Screw may be located under sheave carrier. Angle sheave to access.
2. Angle car and carefully tap on end to get pivot post to come out.
3. Pull out pivot post and remove sheave carrier.
4. For port side hold pivot stop near aft leg of sheave carrier as shown above and insert into car. Push pivot post into hole in end of car until it stops. Screw plastic retaining screw into car to hold pivot post in place.
5. For starboard side, mount stop aft of leg as shown.

For G27 High-Load Cars and G32 cars locate pivot stop on front leg. Be sure to capture bushing located under aft leg when inserting pivot post.

Loctite® is a trademark of Henkel AG & Company KGaA
 McLube™ is a registered trademark of McGee Industries, Inc.
 Torlon® is a registered trademark of Solvay Advanced Polymers.

Inspect

Frequently inspect retaining screw and control block fittings for signs of loosening and replace as necessary. Make sure every installation includes Harken track end stops. Arrange control tackle so cars do not hit end stops under load.

Maintenance

Traveler Cars: Clean by frequently flushing with fresh water. Periodically clean car by squirting a detergent/water solution into center openings. Roll car back and forth to distribute evenly then flush bearings with fresh water.

Do not use spray lubricants because ball bearings may skid not roll. Apply one to two drops of McLube® OneDrop™ to ball contact surfaces of track. Roll car back and forth through OneDrop™ several times to distribute onto bearings. Wipe remaining OneDrop™ off track. OneDrop™ is preferred but you can also use one to two drops of a light machine oil, such as 3-in-1. Too much oil attracts dirt.

Track: Clean with detergent and water.

Important: Exposure to some teak cleaners and other caustic solutions can result in discoloration of part and is not covered under the Harken warranty.

Warranty

For additional safety, maintenance and warranty information see www.harken.com/manuals or the Harken® catalog. Printed in USA
